

RAJIV WILLIAMS

Employee Self-Onboarding Portal — Complete Developer Specification

Website: www.rajivwilliams.com

Document purpose: Developer handover / UI-UX, database, development, security and implementation specification

Version: 1.0 | Date: 18 September 2026

1. Executive Summary

Build a secure Employee Self-Onboarding Portal for Rajiv Williams. The portal will allow HR/Admin to create a selected employee record, automatically generate a unique Employee ID, issue a secure onboarding invitation, and allow the employee to complete all joining formalities from a desktop/laptop. The employee will enter personal, contact, family, education, employment, bank and emergency information; upload required documents; read and acknowledge company policies; provide a declaration; and submit.

After submission, the system must allow authorised HR/Admin users to verify documents, generate a structured Joining Form PDF, maintain a secure digital employee file, and track the onboarding process. The architecture must be future-ready so Attendance, Leave, Payroll, Performance, HR Requests, Assets and Exit Management can later be added without rebuilding the employee database.

2. Core Objective

- Eliminate manual joining forms and scattered WhatsApp/email document collection.
- Create one master employee record linked to a permanent Employee ID.
- Enable employee self-service onboarding.
- Create a structured, secure digital employee file.
- Give HR a central dashboard for onboarding and document verification.
- Automatically generate and store the completed Joining Form.
- Maintain an auditable history of onboarding actions.
- Design the database and permissions for future HRMS expansion.

3. Recommended Portal Architecture

Component	Recommended approach
Public website	www.rajivwilliams.com
Employee portal	employee.rajivwilliams.com OR www.rajivwilliams.com/employee-portal
Employee login	/employee-portal/login
Employee dashboard	/employee-portal/dashboard
HR/Admin dashboard	/employee-portal/admin
Authentication	Email/mobile OTP or secure password + OTP option
Employee ID	Unique permanent ID, e.g. RW-2026-001
Database	Relational employee master with linked records
Document storage	Private/non-public secure storage with access control
PDF	Server-side automated Joining Form generation
Notifications	Email initially; WhatsApp integration can be added later

4. User Roles & Permissions

Role	Required permissions
Super Admin	Full system access; create/edit employees; manage IDs; view all profiles/documents; verify documents; manage HR/Admin users; export data; system settings.
HR/Admin	Create employees; view authorised employees; review onboarding; approve/reject documents; download authorised files; send reminders; generate/view joining forms.
Employee	Access only their own onboarding/profile/documents;

	save progress; upload/replace pending documents; acknowledge policies; submit onboarding; view own submitted documents/forms.
--	---

Critical requirement: Employee-level access control must prevent one employee from accessing another employee's information or documents.

5. HR Workflow — End to End

1. HR/Admin logs into the HR dashboard.
2. HR selects + CREATE NEW EMPLOYEE.
3. HR enters pre-joining information.
4. System generates a unique Employee ID.
5. System creates the employee master record and onboarding checklist.
6. HR clicks SEND ONBOARDING INVITATION.
7. Employee receives secure invitation.
8. Employee verifies identity using OTP/login.
9. Employee completes each onboarding section.
10. Employee uploads required documents.
11. Employee reads and acknowledges applicable policies.
12. Employee reviews all information.
13. Employee accepts the declaration and submits.
14. System records submission date/time and audit event.
15. System generates the Joining Form PDF.
16. HR receives notification that onboarding is ready for review.
17. HR verifies documents and either approves or requests re-upload.
18. Approved documents become locked against unauthorised replacement.
19. Employee record moves to Completed/Active as per HR action.
20. Digital employee file remains linked to the Employee ID.

6. HR — Create New Employee

Screen title: CREATE NEW EMPLOYEE

Field	Required	Notes
First Name	Yes	Employee legal name
Middle Name	No	Optional
Last Name	Yes	Employee legal name
Personal Email	Yes	Used for invitation/OTP
Mobile Number	Yes	Used for OTP/notifications if enabled
Designation	Yes	Dropdown or master list
Department	Yes	Dropdown or master list
Employment Type	Yes	Full-time/part-time/contract/intern etc., as applicable
Date of Joining	Yes	Joining date
Reporting Manager	Yes	Select from employee master
Work Location	Yes	Office/location
CTC/Salary	Restricted	HR/Admin only
Source of Hiring	No	Optional reporting field
Offer Status	Yes	Selected/offer accepted/etc.

7. Employee ID Generation

Use a unique, permanent Employee ID. Recommended format: RW-YYYY-NNN. Example: RW-2026-001. The sequence must be generated server-side and protected from duplicate creation. Employee ID should become the master reference for employee data, documents, onboarding, future attendance, leave, payroll, performance and exit records.

Do not use the employee's mobile number, Aadhaar number or other sensitive identifier as the Employee ID.

8. Employee Invitation

HR action: SEND ONBOARDING INVITATION.

Invitation should contain the employee name, Employee ID, secure onboarding link, basic instructions and a clear expiry period. Do not expose personal documents or sensitive information in the email. OTP/login should be handled through the secure portal.

9. Employee Login & Authentication

- Employee enters Employee ID or approved login identifier.
- System verifies using OTP to registered email/mobile or another secure authentication method.
- Do not send permanent passwords in plain text.
- Session timeout and secure logout must be implemented.
- Rate-limit failed OTP/login attempts.
- Record login events in the audit log.

10. Employee Dashboard

Dashboard should display: employee name, Employee ID, designation, date of joining, onboarding completion percentage and section-wise status.

Section	Example status
Personal Information	Completed / Pending
Contact Information	Completed / Pending
Family & Emergency	Completed / Pending
Education	Completed / Pending
Previous Employment	Completed / Pending
Bank Details	Completed / Pending
Documents	Completed / Pending
Policies & Declarations	Completed / Pending
Final Review & Submission	Completed / Pending

Employee must be able to Save & Continue Later. Progress must persist.

11. Onboarding Form — Section 01: Personal Details

- Full Name
- Date of Birth
- Gender
- Blood Group — optional
- Father's/Mother's/Spouse's Name as applicable

- Nationality
- Marital Status

12. Section 02: Contact Details

- Personal Mobile
- Personal Email
- Current Address
- Permanent Address
- City
- State
- PIN Code
- Option: Current address same as permanent address? If Yes, copy current address to permanent address.

13. Section 03: Family & Emergency Details

- Emergency Contact Name
- Relationship
- Mobile Number
- Alternate Mobile
- Address
- Other family information required by company policy

14. Section 04: Education

Allow multiple education records.

Field	Example
Qualification	MBA
Institution	University/College
Year	2024
Percentage/Grade	78%

Button: + ADD EDUCATION

15. Section 05: Previous Employment

Allow multiple previous-employer records.

- Company Name
- Designation
- Date Joined
- Last Working Date
- Last Drawn Salary — HR restricted if appropriate
- Reason for Leaving
- Reporting Manager
- HR Contact
- Total Experience

Button: + ADD PREVIOUS EMPLOYMENT

16. Section 06: Bank Details

- Account Holder Name
- Bank Name
- Account Number
- IFSC
- Branch
- Cancelled Cheque / Bank Proof upload

Bank details are sensitive and should be restricted to authorised HR/Admin users.

17. Section 07: Document Upload

Category	Documents
Identity	PAN Card; Aadhaar or acceptable ID proof; Photograph
Education	Highest Qualification Certificate; relevant Mark Sheets
Previous Employment	Experience Letter; Relieving Letter; Last Salary Slips, as applicable
Bank	Cancelled Cheque / Bank Proof
Other	Any additional document required by HR

The document checklist must be configurable by HR/Admin so different employee categories can have different requirements.

18. Document Upload Experience

- Allowed file types: PDF, JPG, JPEG, PNG.
- Configurable maximum file size.
- Show upload progress.
- Display Uploaded / Pending / Approved / Re-upload Required status.
- Employee may replace a document until HR approves it.
- Once approved, the document is locked against employee replacement/deletion.
- Rejected documents must include a reason.
- Employee should receive notification when re-upload is required.

19. HR Document Verification

Status	Meaning
Pending	Uploaded but not yet reviewed
Approved	Verified by authorised HR/Admin
Rejected / Re-upload Required	Employee must upload a replacement
Locked	Approved document cannot be altered by employee

HR review screen should provide View, Download where permitted, Approve, Reject and Reason fields.

20. Policies & Declarations

Portal should allow HR to publish or attach applicable company policies, including Employee Handbook, Confidentiality, Code of Conduct, Leave Policy, Attendance Policy, Work From Home Policy, IT/Device Policy, Social Media Policy, Data Confidentiality, NDNC/Non-solicitation where applicable, and other applicable policies.

Each policy should have View/Download and an acknowledgement checkbox. Store employee name/ID, policy version, acknowledgement timestamp and IP/device metadata as permitted by applicable law and company policy.

21. Final Declaration

Recommended declaration: “I confirm that the information and documents submitted by me are true and complete to the best of my knowledge. I understand that submission of incorrect or misleading information may be subject to company policy and applicable law.”

Employee must select I Agree before submission. Capture date/time and acknowledgement against the employee record.

22. Final Review & Submission

21. Display complete summary of employee-entered information.
22. Provide Edit buttons by section.
23. Show outstanding mandatory fields/documents.
24. Prevent submission while mandatory requirements remain incomplete.
25. Provide final declaration.
26. Employee clicks SUBMIT ONBOARDING.
27. System timestamps and locks the submission state subject to HR re-opening.
28. Show confirmation with Employee ID.

23. Automated Joining Form PDF

After successful submission, automatically generate a professionally formatted PDF titled: RAJIV WILLIAMS — EMPLOYEE JOINING FORM.

Include Employee ID, employee identity, personal/contact information, family/emergency details, education, previous employment, bank information as appropriate for the HR copy, declarations and acknowledgement. The system should store the PDF against the employee record and allow authorised HR/Admin to download it.

Consider producing two variants if needed: HR Master Joining Form (with restricted fields) and Employee Copy (excluding restricted HR-only information).

24. Digital Employee File

The system should logically organise each employee's records as follows:

- RW-2026-001 — EMPLOYEE NAME
- 01_Personal_Details
- 02_KYC_Documents
- 03_Education
- 04_Previous_Employment

- 05_Bank_Documents
- 06_Joining_Documents
- 07_Policies_&_Declarations
- 08_Other_Documents

Important: this should be implemented as a secure employee record/document repository, not as a publicly accessible website folder.

25. HR Dashboard

Dashboard item	Requirement
Total Employees	Count
Onboarding Pending	Count
Documents Pending	Count
HR Verification Pending	Count
Completed	Count
Search	Name / Employee ID / Mobile / Department
Filters	New Joiners; Pending; Verification; Completed; Active; Inactive; Exited

26. Employee Profile — HR View

Profile should contain tabs: Overview | Personal | Employment | Documents | Policies | Joining Form | Activity Log.

Profile header should show Employee Name, Employee ID, status, DOJ, designation, department and reporting manager.

27. Activity / Audit Log

Record significant events, including employee creation, invitation sent, login, document upload, document approval/rejection, re-upload, policy acknowledgement, final submission, HR changes and status changes.

Example: 18-Sep-2026 — Employee created; 18-Sep-2026 — Invitation sent; 19-Sep-2026 — PAN uploaded; 19-Sep-2026 — PAN approved; 20-Sep-2026 — Onboarding submitted.

28. Automated Reminders

- 24 hours after invitation: onboarding reminder.
- 48 hours after invitation: second reminder.
- 72 hours after invitation: escalation/reminder.
- HR dashboard should flag onboarding pending beyond a configurable number of hours/days.
- Reminder frequency and templates should be configurable.

29. Notifications

Event	Employee	HR/Admin
Invitation sent	Yes	Optional
OTP	Yes	No
Document approved	Yes	No

Document rejected	Yes	Yes/optional
Onboarding submitted	Yes	Yes
Onboarding completed	Yes	Yes
Reminder	Yes	Dashboard alert

30. Security & Privacy — Mandatory

- HTTPS/TLS throughout the portal.
- Role-based access control.
- Employee-level data isolation.
- No public document URLs.
- Private document storage with authorised access.
- Secure authentication and session management.
- OTP/login rate limiting.
- File-type and file-size validation.
- Malware/security scanning where feasible.
- Audit logging.
- Regular backups.
- Least-privilege access.
- Secure deletion/retention process defined by company policy and applicable law.
- Sensitive information such as identity and bank documents must not be exposed through ordinary website pages, search indexing or predictable file URLs.

Developer must specifically confirm how uploaded documents are protected from direct public access before production launch.

31. Data Model — Minimum Recommended Entities

Entity	Purpose
Employee	Master employee record and status
Employee Personal	Personal information
Employee Contact	Addresses/contact information
Emergency Contact	Emergency/family records
Education	Multiple education records
Employment History	Multiple previous-employer records
Bank Details	Restricted banking information
Document	Document metadata and secure storage reference
Policy	Policy master and versions
Policy Acknowledgement	Employee acknowledgement/version/timestamp
Onboarding	Progress/status/submission information
Audit Log	Immutable/controlled activity history
User/Role	Authentication and authorisation
Notification	Email/reminder history

32. Employee Statuses

Recommended statuses: Draft → Invitation Sent → In Progress → Submitted → HR Verification → Re-upload Required → Completed → Active → Inactive → Exited.

33. Document Metadata

For every uploaded document, store at minimum: Employee ID, document category, document type, original filename, secure storage reference, uploaded by, uploaded date/time, status, verified by, verified date/time, rejection reason and version number.

34. Search & Filters

- Employee ID search must return the employee immediately.
- Name search.
- Mobile/email search subject to access permissions.
- Department/designation filters.
- Joining-date filters.
- Onboarding status filters.
- Document verification filters.
- Active/Inactive/Exited status filters.

35. Data Export

Authorised HR/Admin should be able to export an Employee Master report in CSV/Excel format containing non-document employee fields. Sensitive document files must not be embedded into a general employee export. Access to sensitive fields should be permission controlled.

36. HR Re-open / Correction Workflow

HR should be able to reopen a submitted onboarding record when correction is required. The system should record who reopened it, why, when it was reopened, what changed and when it was resubmitted.

37. File Naming Convention

Recommended: EmployeeID_DocumentType_Version_Date. Example: RW-2026-001_PAN_V1_2026-09-19.pdf. The system should generate names server-side rather than relying solely on employee-provided filenames.

38. UI/UX Requirements

- Clean, professional Rajiv Williams branding.
- Desktop/laptop-first because the primary onboarding workflow is intended for employee completion on a computer; responsive behaviour should still support mobile viewing.
- Simple step-by-step navigation.
- Persistent Save & Continue.
- Clear mandatory-field indicators.
- Visible progress percentage.
- Clear success/error messages.
- Accessible document upload controls.
- Confirmation before final submission.
- Minimal distractions from the public website.

39. Public Website vs Employee Portal

The employee portal should be visually aligned with Rajiv Williams branding but operationally separated from the public-facing website. Do not expose HR navigation, employee records or login links unnecessarily in the public website.

40. Recommended Phase 1 — MVP

29. HR/Admin login
30. Create employee
31. Automatic Employee ID
32. Secure employee invitation
33. Employee authentication
34. Multi-step onboarding form
35. Save and continue
36. Document upload
37. HR document verification
38. Policy acknowledgement
39. Final declaration
40. Final submission
41. Joining Form PDF
42. Secure employee document repository
43. HR dashboard
44. Audit log
45. Email notifications/reminders

41. Phase 2 — HRMS Expansion

- Offer letter generation
- Appointment letter generation
- E-signature integration
- Attendance
- Leave management
- Payslips/payroll integration
- Performance management
- Appraisals
- Training
- Company asset allocation
- HR requests
- Employee self-service documents
- Exit management
- Full & Final Settlement workflow

42. Future-Proofing Requirement

Developer must not create a one-off form that stores information only in a PDF or email. All structured fields must be stored in a database with Employee ID as the master relationship. Documents should be stored separately with secure references. The architecture must support additional HR modules later.

43. Acceptance Criteria / Definition of Done

46. HR can create an employee and receive a unique Employee ID.
47. Employee can securely access only their own onboarding.
48. Employee can save progress and return later.
49. All mandatory fields are validated.
50. Multiple education and employment records can be added.
51. Required documents can be uploaded and tracked.
52. HR can approve/reject documents with reasons.
53. Approved documents are protected from employee modification.
54. Policies can be versioned and acknowledged.
55. Final declaration is recorded.
56. Joining Form PDF is generated automatically.
57. Employee record and documents are accessible from the HR profile.
58. Audit trail captures key events.
59. Automated reminders work.
60. Sensitive documents cannot be accessed publicly.
61. Role-based access works correctly.
62. HR can search/filter employees.
63. Authorised export works without exposing restricted documents.
64. Backup and recovery process is defined.
65. Developer demonstrates an end-to-end test using a dummy employee before production.

44. Testing Scenarios

Scenario	Expected result
HR creates duplicate employee	System prevents duplicate ID
Employee leaves onboarding midway	Progress is saved
Wrong/unclear document	HR rejects and employee is asked to re-upload
Employee attempts another employee's URL	Access denied
Unauthorised user opens document URL	Access denied
Employee edits approved document	Not permitted
Mandatory field missing	Submission blocked
Employee submits twice	System prevents duplicate final submission
HR reopens record	Audit log records reason and actor
Expired invitation	Employee must request/receive a fresh secure invitation
Failed OTP attempts	Rate limit/temporary protection
Backup restoration test	Employee records/documents recover successfully

45. Developer Deliverables

- UI/UX screens/wireframes.
- Frontend employee portal.
- HR/Admin dashboard.
- Backend/database.
- Authentication and role permissions.
- Secure document storage.
- PDF generation module.
- Notification/reminder engine.

- Audit logging.
- Admin configuration for document checklists and policies.
- Deployment to production.
- SSL/security configuration.
- Backup configuration.
- Technical documentation.
- Admin/HR user guide.
- Source code and deployment credentials/ownership documentation.
- Test report and production handover.

46. Questions Developer Must Answer Before Development

66. What platform/CMS is www.rajivwilliams.com currently using?
67. Will the employee portal be a subdomain or directory?
68. Where will structured employee data be stored?
69. Where will sensitive documents be stored, and how are public URLs prevented?
70. What authentication method will be used?
71. How will Employee IDs be generated and protected against duplication?
72. How will role-based access be enforced?
73. How will documents be backed up and restored?
74. How will audit logs be protected from unauthorised editing?
75. How will email/OTP delivery be configured?
76. What is the expected implementation timeline?
77. What is the development cost and recurring hosting/service cost?
78. What third-party services/plugins are required?
79. Who owns the source code, database, storage and administrator accounts?
80. What is the disaster recovery process?
81. What is the post-launch support/warranty period?

47. Recommended Implementation Principle

Build the portal as a secure HR application connected to the Rajiv Williams domain, not as a simple contact form. The Employee ID should be the permanent master reference. Structured information belongs in the database; documents belong in private storage; generated forms belong in the employee record; and every sensitive action should be permission-controlled and auditable.

48. Suggested Employee Journey — Visual Flow

HR creates employee → Employee ID generated → Secure invitation → Employee login/OTP → Personal details → Contact → Family/Emergency → Education → Previous Employment → Bank → Documents → Policies → Declaration → Review → Submit → Joining Form PDF → HR verification → Re-upload if required → Approval → Completed Employee File.

49. Suggested HR Journey — Visual Flow

HR Login → Dashboard → Create Employee → Employee ID → Send Invitation → Track Progress → Review Submission → Verify Documents → Approve/Reject → Generate/View Joining Form → Complete Onboarding → Employee becomes available in Employee Master → Future HR modules use same Employee ID.

50. Final Instruction to Web Developer

Please treat this document as the functional requirements specification for the Rajiv Williams Employee Self-Onboarding Portal. Before coding, provide UI/UX wireframes, technical architecture, database schema, security approach, development timeline, project cost, recurring third-party costs and deployment plan for approval. Do not commence production deployment until the secure-document architecture, role permissions and end-to-end test flow have been demonstrated and approved.

Appendix A — Minimum Employee Document Checklist

Category	Document	Mandatory?	Configurable?
Identity	PAN Card	Yes	Yes
Identity	Aadhaar / acceptable ID proof	Yes	Yes
Identity	Photograph	Yes	Yes
Education	Highest Qualification Certificate	Yes	Yes
Education	Relevant Mark Sheets	As applicable	Yes
Employment	Experience Letter	As applicable	Yes
Employment	Relieving Letter	As applicable	Yes
Employment	Salary Slips	As applicable	Yes
Bank	Cancelled Cheque / Bank Proof	Yes	Yes
Other	Additional HR-required documents	As applicable	Yes

Appendix B — Suggested Employee ID Examples

- RW-2026-001
- RW-2026-002
- RW-2026-003

Appendix C — Suggested Dashboard Labels

- Create New Employee
- Send Invitation
- Onboarding Progress
- Documents Pending
- HR Verification
- Re-upload Required
- Approve
- Reject
- View Document
- Download Joining Form
- Re-open Onboarding
- Mark Completed
- Active
- Inactive
- Exited

Appendix D — Important Scope Boundary

This specification defines the functional and security requirements. Legal wording for declarations, employment contracts, privacy notices, data retention, Aadhaar handling, non-solicitation/non-compete language and other employment documentation should be finalised by the company with appropriate professional/legal advice before production use.
